Software Requirements

- Requirement collections and Analysis

- ❖ Software Configuration:

This Software package is developed using flutter framework which supported by IOS and Android Operating system. Firebase use for database.

- ❖ Hardware Configuration:

API: 15

Android version:

IOS version:

Ram: 2 GB

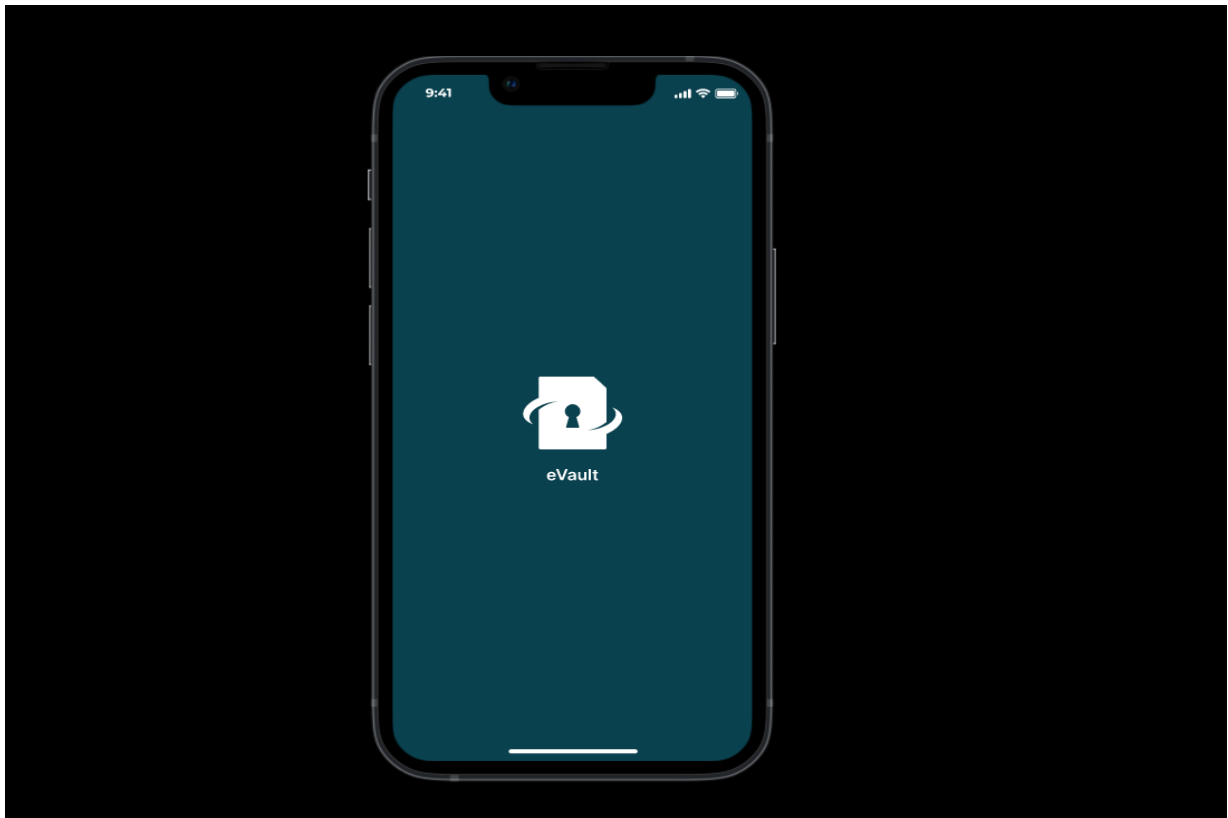

ROM: 16GB

- Analysis

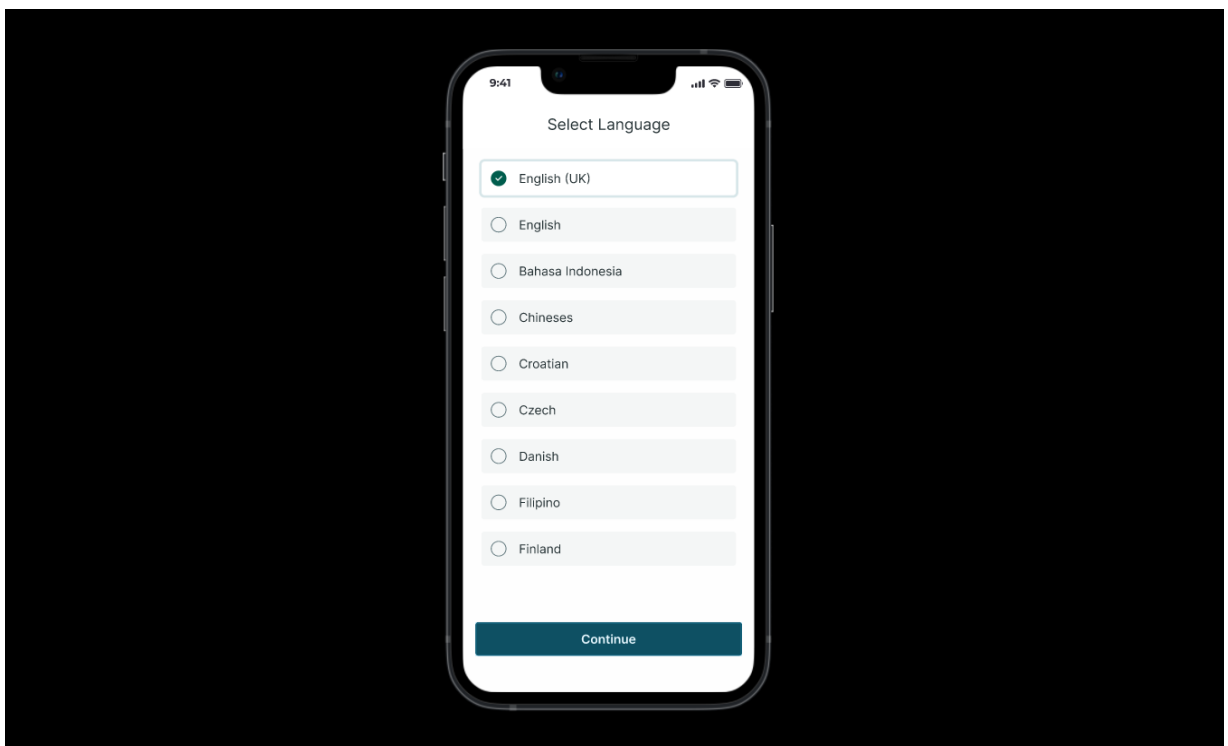

- ❖ Purpose

The purpose of the **eSafeGuard** eVault and Locker aims to guide users in securely storing passwords, images, and bank account numbers. It outlines the platform's robust security features, provides clear usage instructions, and offers troubleshooting tips. Additionally, it explains the compliance with data protection regulations and emphasizes best practices for maintaining security. The documentation also ensures users are informed about software updates and the company's commitment to safeguarding their sensitive information.

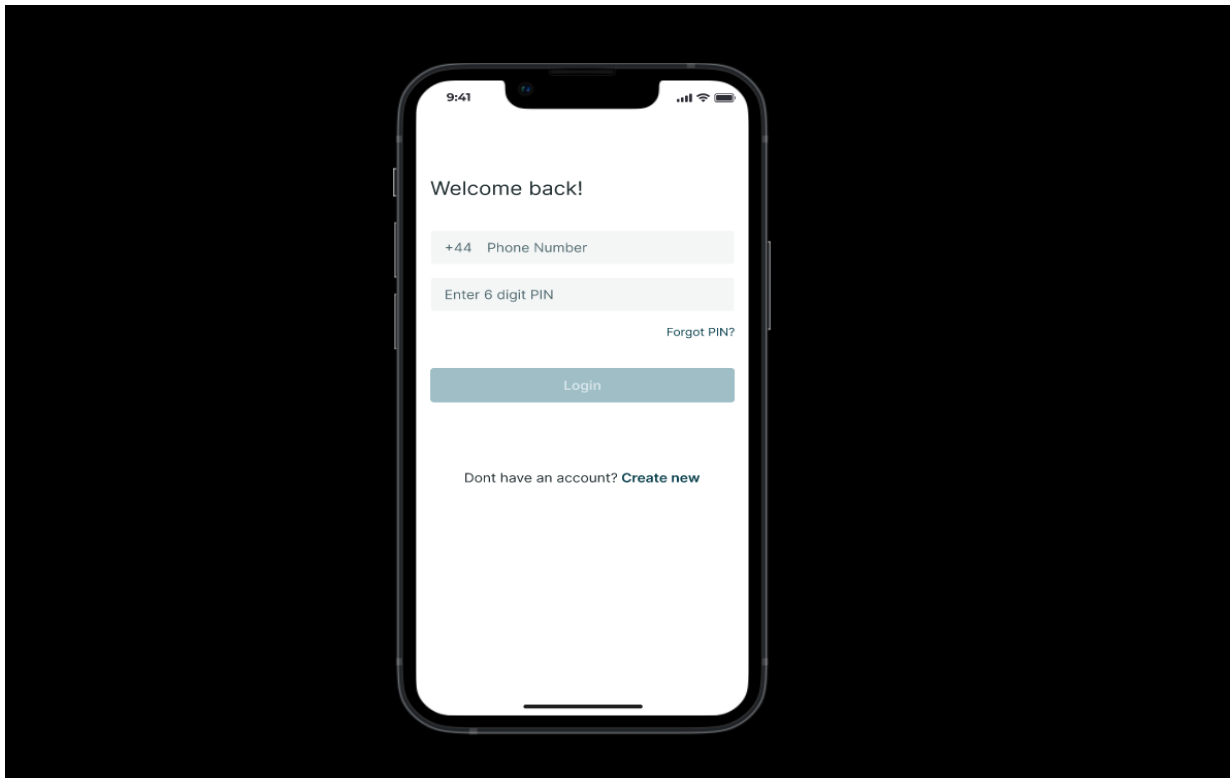

❖ Design for User Display

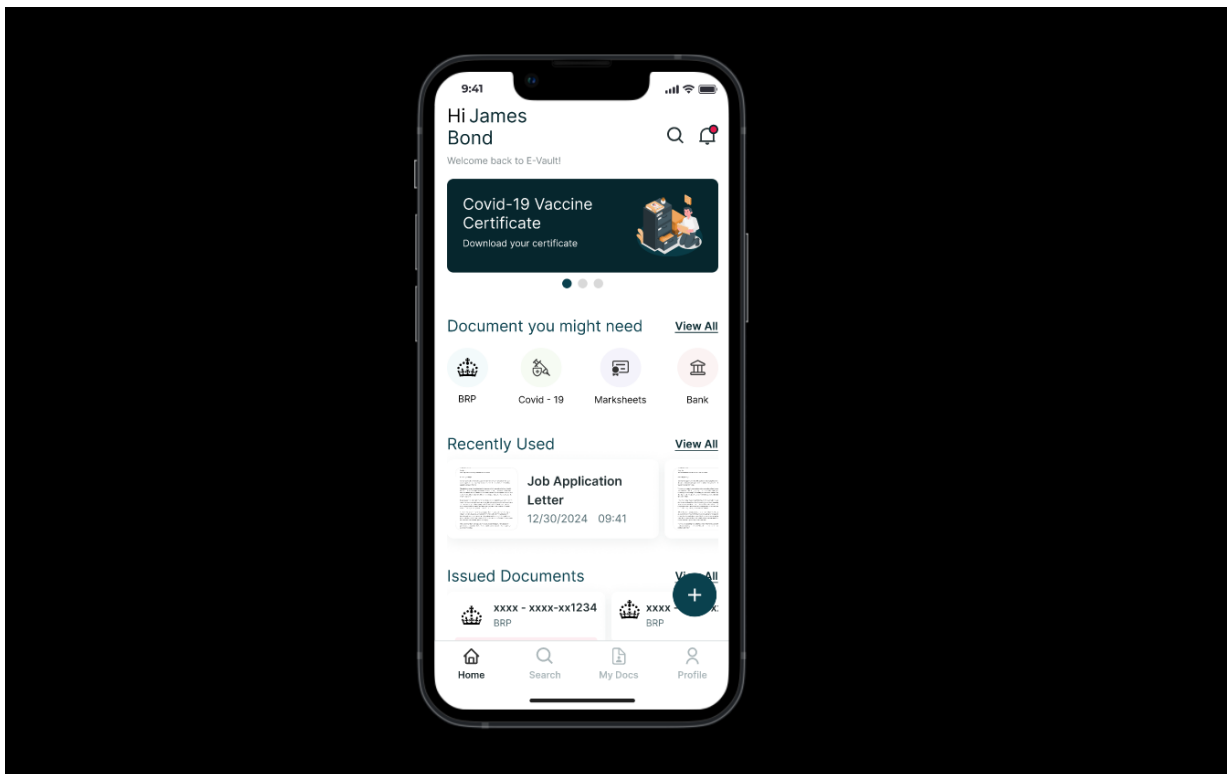

❖ Language Select

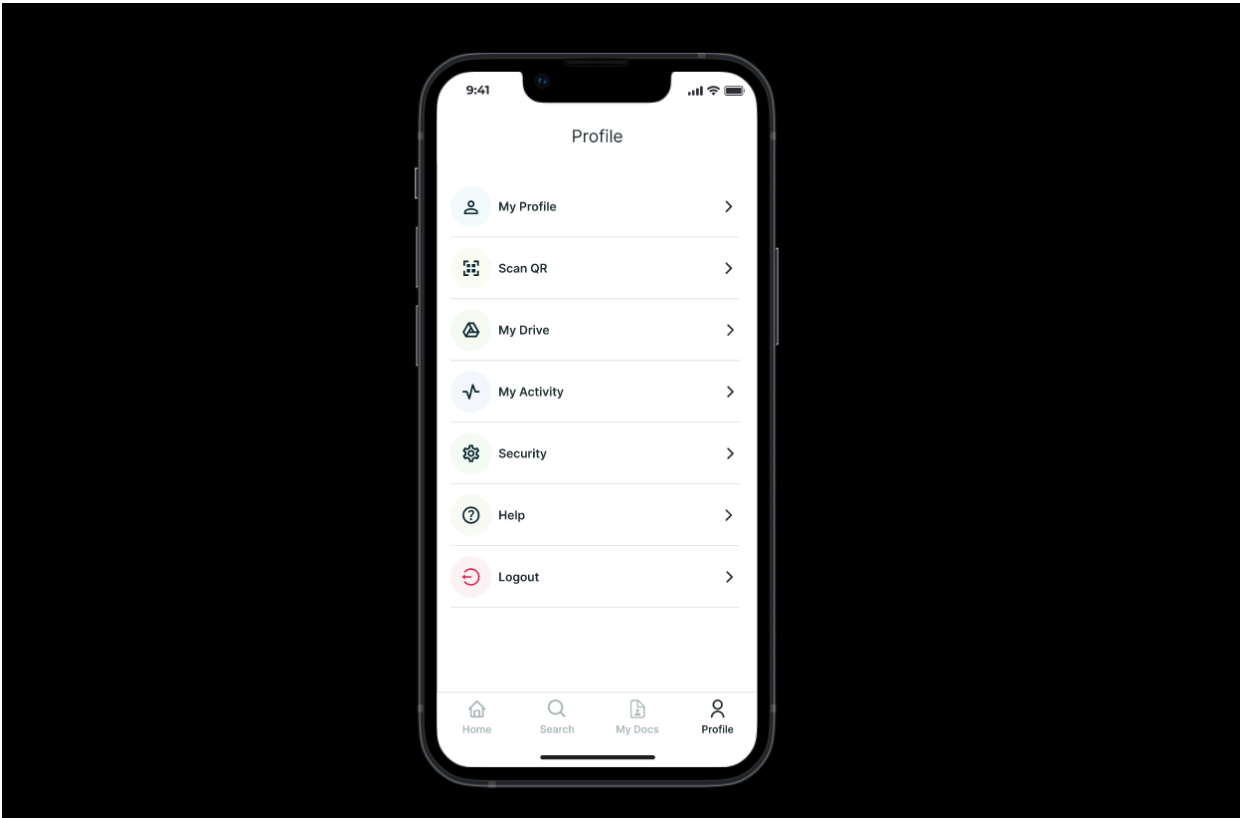

❖ Account log in

❖ Main Screen

❖ User Profile

❖ Some Functions
